

Terms and conditions for purchase and delivery Byggbetong

The concrete price is subject to changes annually according to the construction index for ready-mixed concrete 1022 with the base month January of the previous year, unless other index text is stated in the tender. The same applies to freight rates and prices for concrete pumping with the contract index for Transporter 6011.

Otherwise, at the time of delivery, the current Price List for ready-mixed concrete applies.

Statutory VAT applies. 30 days payment after customary credit check.

We use the Dun & Bradstreet credit service as the basis for creditlimit.

Delivery Regulations

General delivery terms and conditions for ready-mixed concrete (ABM 07-ready-mixed concrete) or updated version apply. For pumping, PV 14 or updated edition applies.

The transport condition assumes BK1 applies unless otherwise agreed. The buyer is responsible for ensuring that the route to the property meets the standard BK1 route.

Ordering/rebooking

Booking of concrete should be made well in advance of delivery, no later than 12:00 two days before delivery. Concrete pumping should be called off no later than 5 days before pouring. In case of cancellation, pump and concrete must be cancelled no later than 09:00 the day before delivery. If this happens later, the seller has the right to charge the required costs. Major changes to volume must be made no later than two days before casting.

Delivery conditions

All factories that Byggbetong has are certified according to production class I, VUC certification rules and follow the Swedish Concrete Association's quality manual. The concrete is third-party certified. All concrete is manufactured and delivered in accordance with SS EN 206 and SS 137003. Construction concrete cannot guarantee low concrete temperatures in the summer when both aggregate, water and cement are hot. Byggbetong submits a reservation if a cement shortage of the cement supplier should occur and can then possibly not guarantee delivery of concrete. It is the Buyers responsibility to ensure that pump set-up and concrete truck deliveries can take place at the site to designated areas, otherwise Byggbetong has the right to charge a reasonable cost for, for example, waiting time/overtime. The buyer is responsible for ensuring that splash guards are set up if this is necessary when unloading. Opening hours 06:30 to 15:30. In the case of overtime or deliveries outside working hours, overtime supplements will be charged according to the current price list. The minimum temperature for delivery by concrete chute or pumping is -15C. The minimum concrete order is 1m³ of traditional concrete, 1.5m³ of SKB and at least 2m³ of air-added concrete. Unloading time is included with 20 minutes/load, after which an extra cost is charged according to the

current Price List. In winter from 1 October to 30 April, a winter supplement of 95 SEK/m³ will be added according to the current price list unless otherwise quoted.

Minimum freight charge 5m³. Byggbetong has the right to charge compensation for recycled concrete and flushing that cannot be carried out at the workplace. The workplace is obliged to have a designated place for transport flushing.

Security and reception control

The buyer is responsible for ensuring that the ground conditions to the parking area meet the requirements that the pump in question has on the substrate. The buyer needs to ensure that the right ground conditions are in place and that they have otherwise taken measures to ensure that they are a safe installation. Byggbetong has the right not to set up the pump if there is a risk that the correct ground conditions do not exist. The buyer must ensure that the route to casting is safe and there is no risk of third parties being injured when reversing or entering the workplace. The buyer is responsible for carrying out a reception check on the concrete, both on the delivery note and an ocular assessment of the composition. If there is no one responsible for concrete delivery, the customer takes responsibility for ensuring that the right concrete is used.

Complaint

For all deliveries, a visual inspection of the composition must be made and the delivery note must be examined. If a fault has occurred, this must be immediately reported to Byggbetong and the casting stopped. In the event of defects that the buyer discovered or should have discovered but still uses the concrete, Byggbetong takes no responsibility for the end result and no financial compensation can be received. In the event of a fault, Byggbetong must be given the opportunity to either investigate the fault or be consulted before any action is taken. If a defect is fixed on the concrete where Byggbetong is considered responsible, without Byggbetong being contacted, we disclaim financial responsibility. As soon as a fault has occurred, this must be reported to Byggbetong. If the composition of the concrete is changed by the customer without consulting the concrete supplier, we waive the warranty. If the concrete has been handled incorrectly, no warranty terms apply.
